VATSIM
South America
Control

Dear Virtual Air Traffic Controller, welcome to our community!

South America Control (SAM_FSS) provides en-route ATC services in upper airspace sectors (FL245+) in three divisions: VATSUR, VATCA, and VATBRZ.

Divided into four zones North, South, West, and East. Our main objective is to grow up our region with more ATC when local CTRs are offline and to provide highly professional ATC service.

Please visit our website fss.vatsa.net for more information.

Important Info

The South America Control sector files are handcrafted by our specialists and made with love.

These files are to be used with EuroScope only. Installing the latest BETA is crucial for the sector files to function properly.

Please note that altering anything will render the files un-usable. Changing the predefined profiles i.e., range, callsign, controller info etc. is not allowed, this is to make sure everything is standardized throughout our region.

Enjoy your time on SAM_FSS.
